## Optional accessories

Wiegand Card Reader

Prox Card

RS485 Convertor

K2 Exit Button

ZK4500 Enrollment reader

CR20E Card Enroller

RS485 Fingerprint Reader

InBio Pro Cabinet

## Safety Precautions

The following precautions are to keep user's safe and prevent any damage. Please read carefully before installation.

**Do not** install the device in a place subject to direct sun light, humidity, dust or soot.

**Do not** place a magnet near the product. Magnetic objects such as magnet, CRT, TV, monitor or speaker may damage the device.

**Do not** place the device next to heating equipment.

**Be careful** not to let liquid like water, drinks or chemicals leak inside the device.

**Do not** let children touch the device without supervision.

**Do not** drop or damage the device.

**Do not** disassemble, repair or alter the device.

**Do not** use the device for any other purpose than specified.

**Clean** the device often to remove dust on it. In cleaning, do not splash water on the device but wipe it out with smooth cloth or towel.

**Contact** your supplier in case of a problem.

# Product PIN Diagram

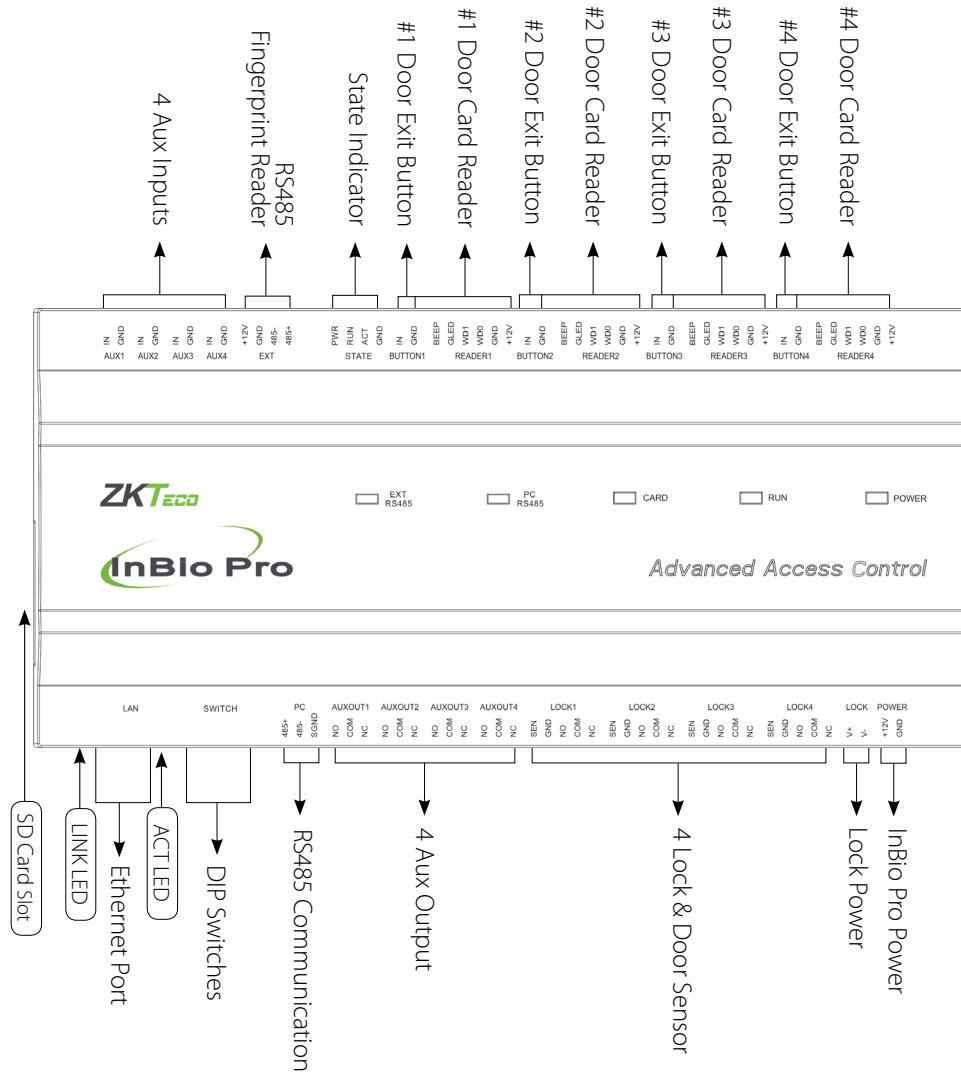

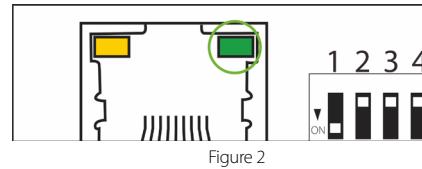

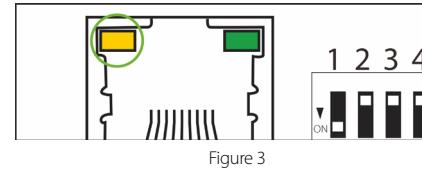

Figure 1

# LED Indicators

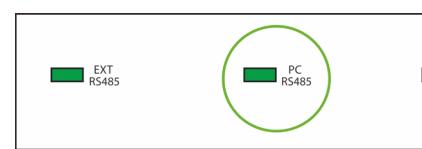

■ **LINK** Solid Green LED indicates TCP/IP communication is normal.

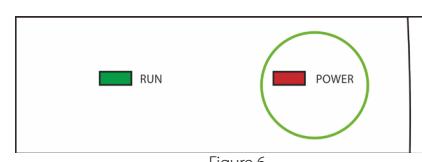

■ **Flashing (ACT)** Yellow LED indicates data communication is in progress.

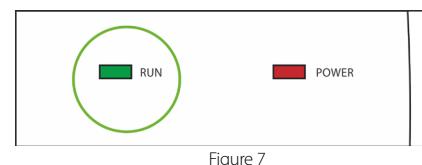

■ **EXT RS485 (TX/RX)** Flashing Yellow & Green LED indicates communication is in progress.

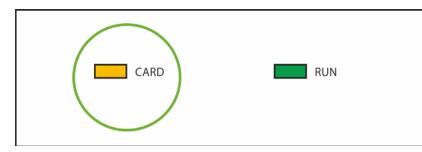

■ **PC RS485 (TX/RX)** Flashing Yellow & Green LED indicates communication is in progress.

■ **Flashing (POWER)** Red LED indicates the panel is powered on.

■ **Flashing (RUN)** Green LED indicates that panel is in normal working state.

■ **Flashing (CARD)** Yellow LED indicates that the card is read by the panel.

# Product Dimension

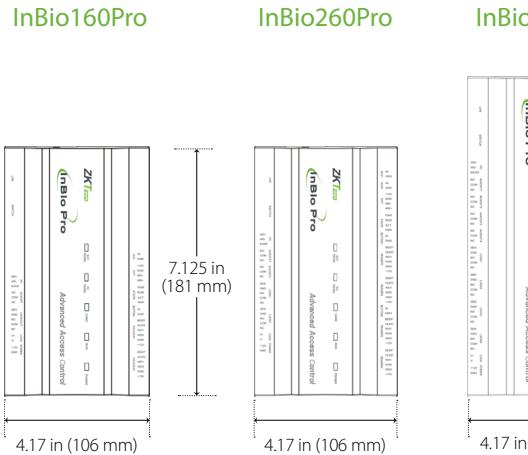

Figure 9

# Installation of Panel & Cabinet

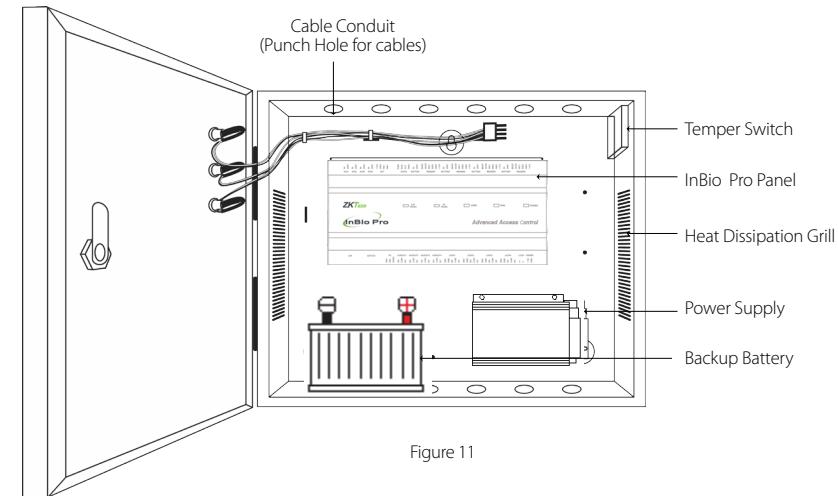

Figure 11

**Step 1**  
Pass the cable through holes

**Step 2**  
Mount the Metal Cabinet

**Step 3**  
Insert the InBio Pro Panel as it shown

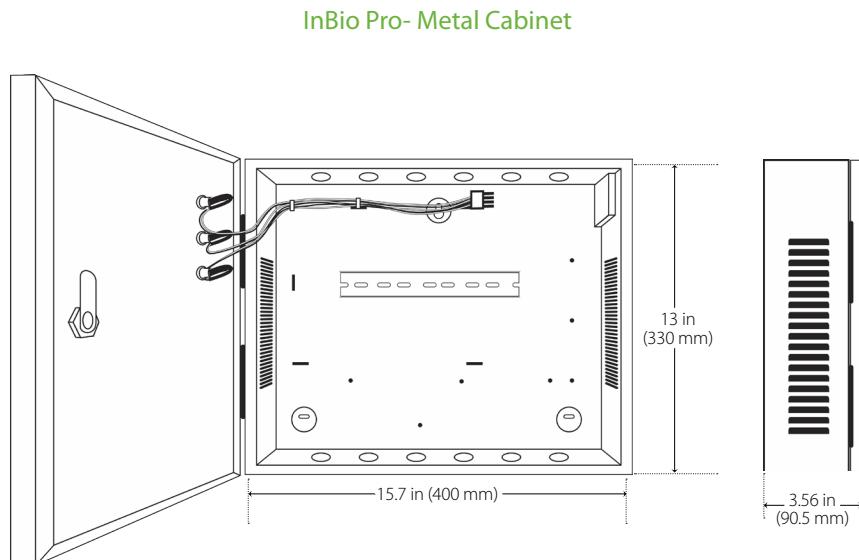

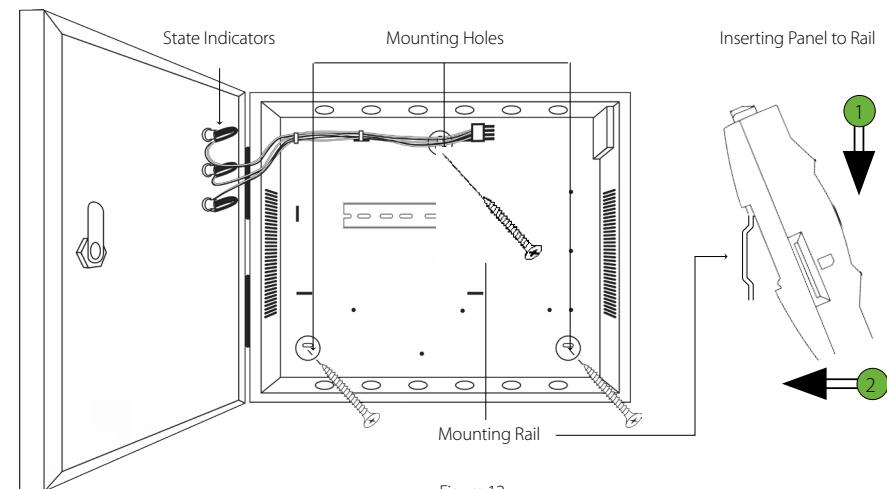

Figure 10

We recommend drilling the mounting plate screws into solid wood (i.e. stud/beam). If a stud/beam cannot be found, then use the supplied drywall plastic mollys (anchors).

## Wiring Legend

## Power Wiring Diagram

### Without Backup Battery

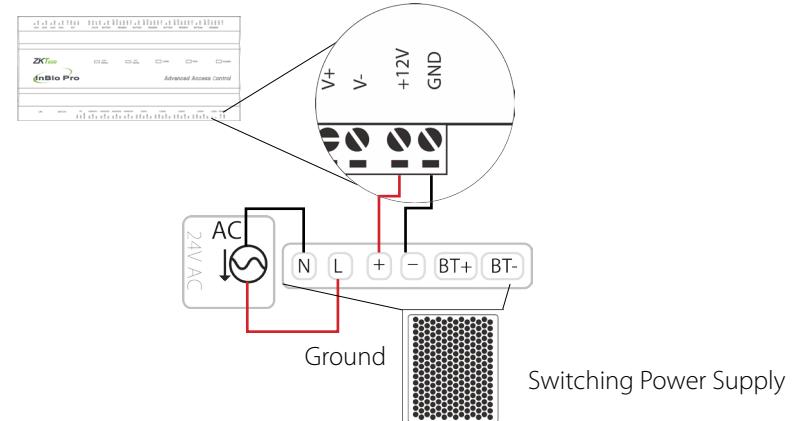

Figure 14

### With Backup Battery

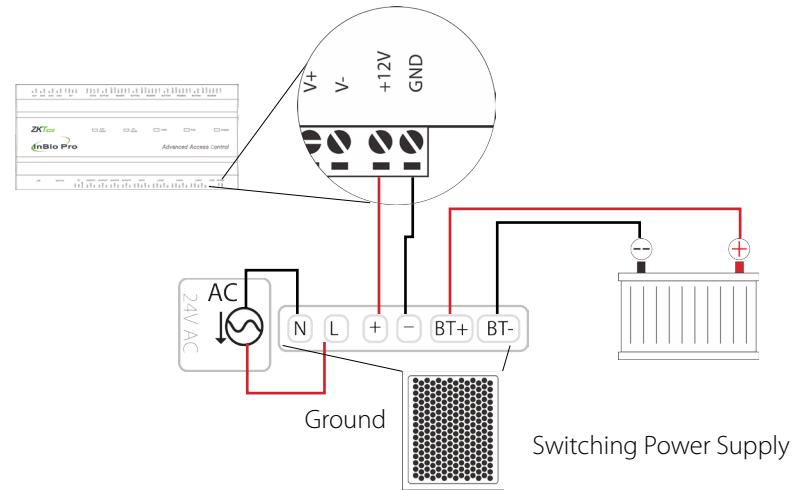

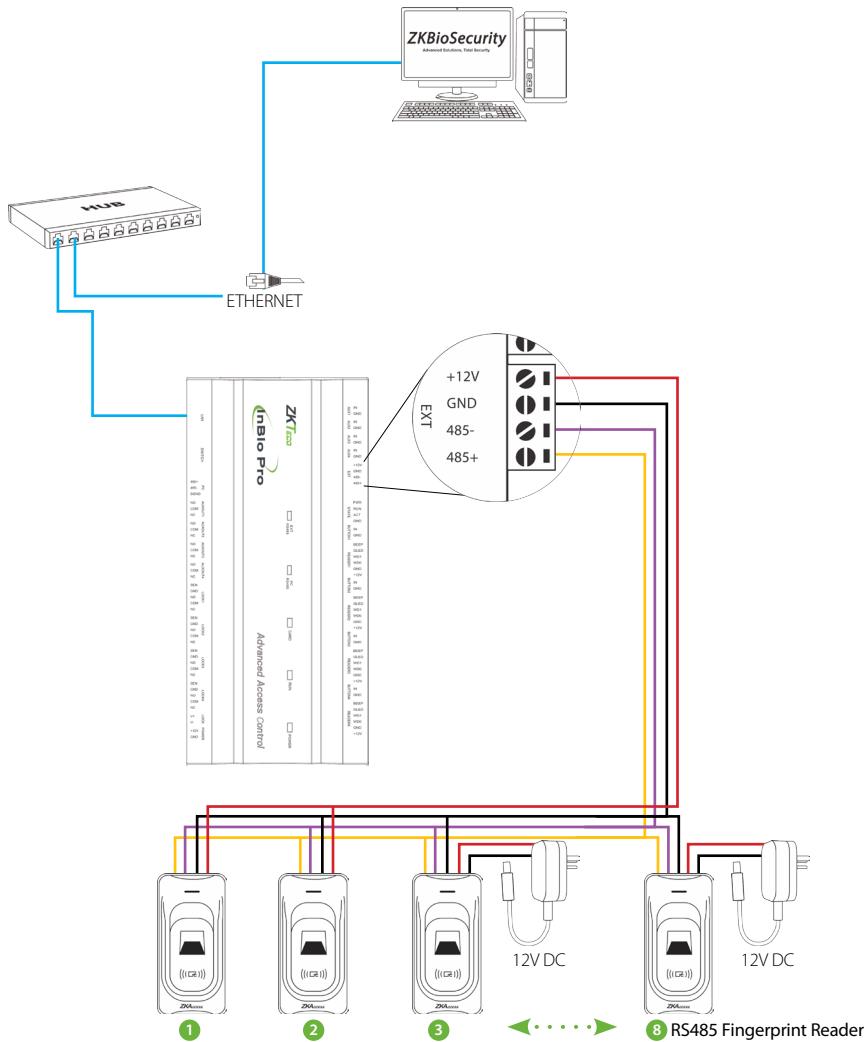

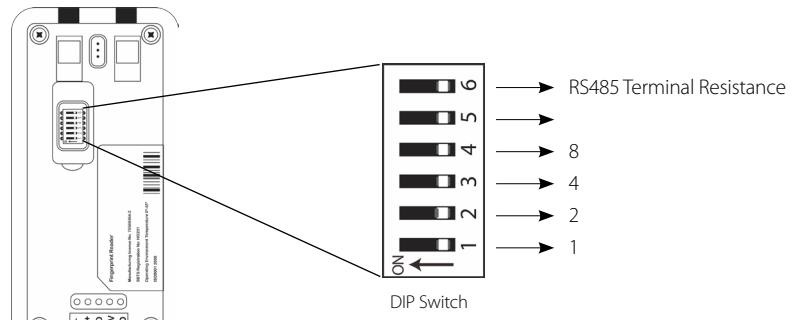

Figure 15

## RS485 Fingerprint Reader Connection

## DIP Switch Setting for RS485 Reader

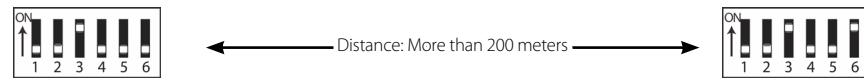

### Important Notes

- There are six DIP switches on the back of RS485 fingerprint reader, Switches 1-4 is for RS485 address, switch 5 is reserved, switch 6 is for reducing noise on long RS485 cable.
- Set the odd number for IN reader, and the even number for OUT reader (for eg. For two readers for one door the RS485 address 1 is for IN reader, RS485 address 2 is for OUT reader)
- If RS485 fingerprint reader is pow-

ered from InBio460Pro panel ,the length of wire should be less than 100 meters or 330 ft.

- The External RS485 interface can supply maximum 500mA current, The RS485 fingerprint reader's startup current is 240mA. So InBio460Pro only can power two RS485 fingerprint readers.
- If the cable length is more than 200 meters or 600 ft , the number 6 switch should be ON as below:

# Wiegand Connection

# REX Connections

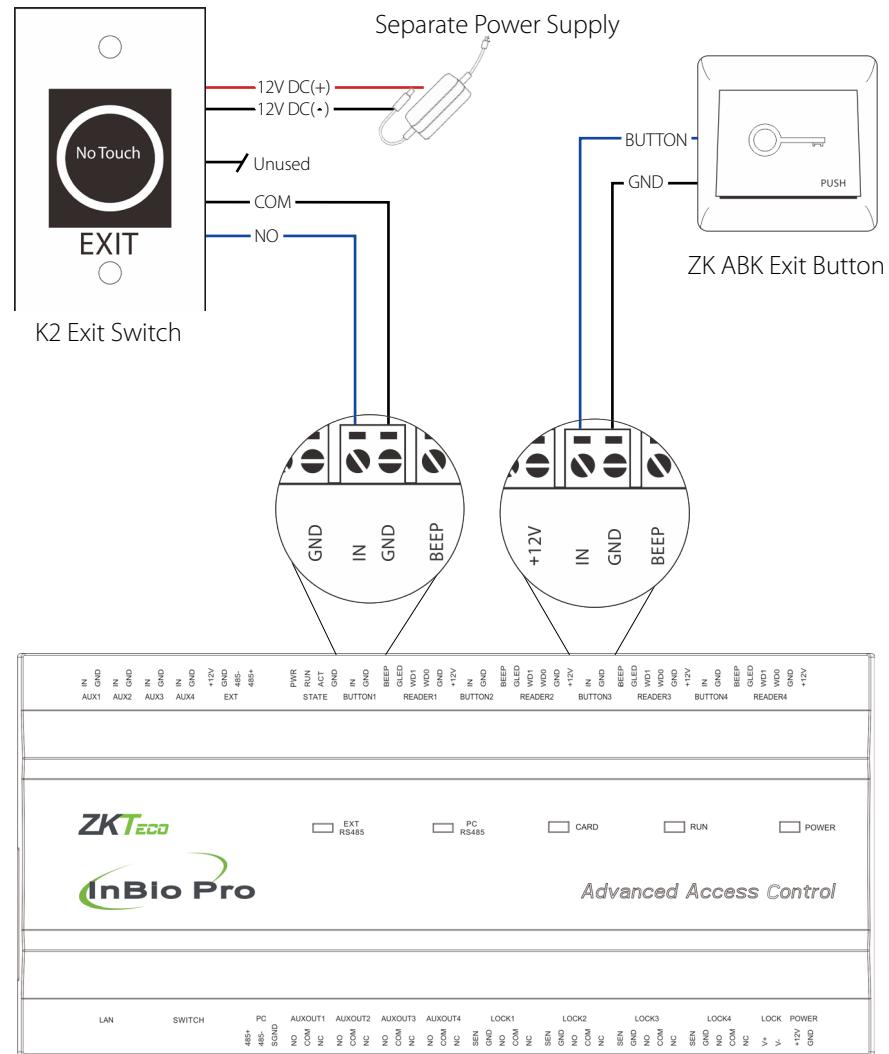

Figure 19

# Lock Connection

## Connecting a Lock with External to Power Supply (Dry Contact)

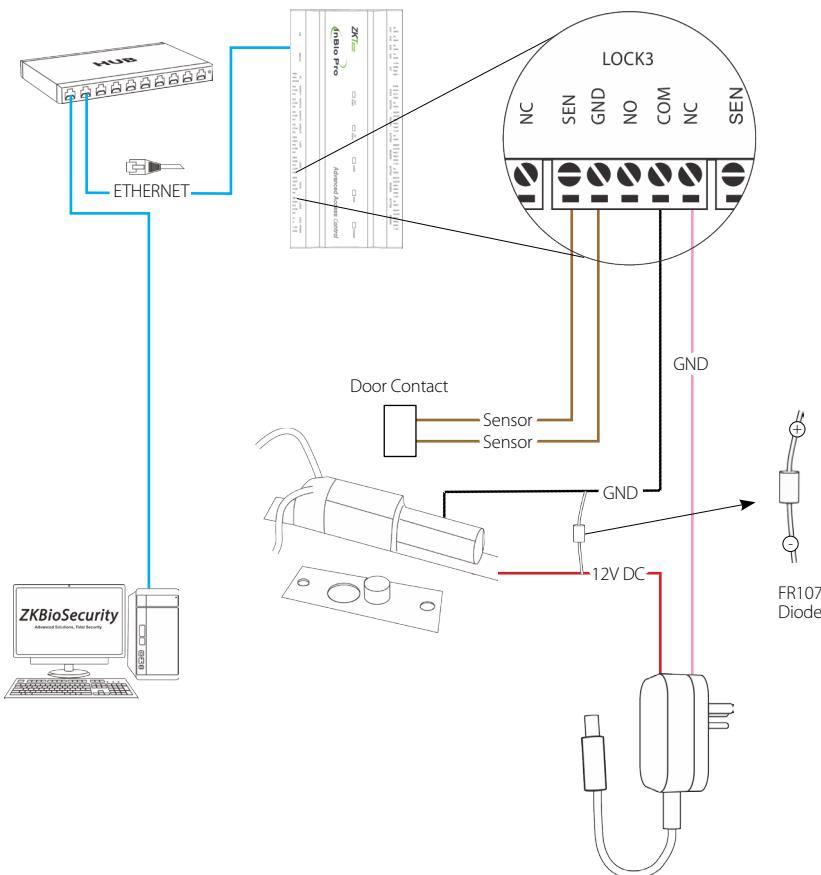

Figure 20

## Switching Dry Contact to Wet Contact

### Important Notes:

The factory default jumper setting is set as dry mode. If you want to power the lock from the panel, you must take the following steps:

1. Take apart the cover of InBio460Pro. Push the tab inward (see figure 21)
2. Select the appropriate lock relay and find its jumpers
3. Take off the jumpers and change  to 
4. Connect the lock as show in the diagram, (see figure 23 and 24)

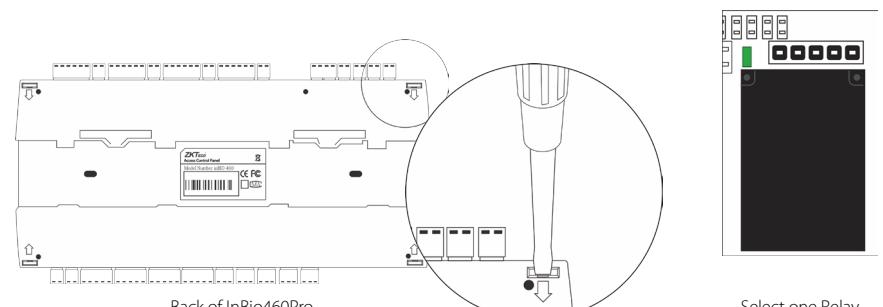

Figure 21

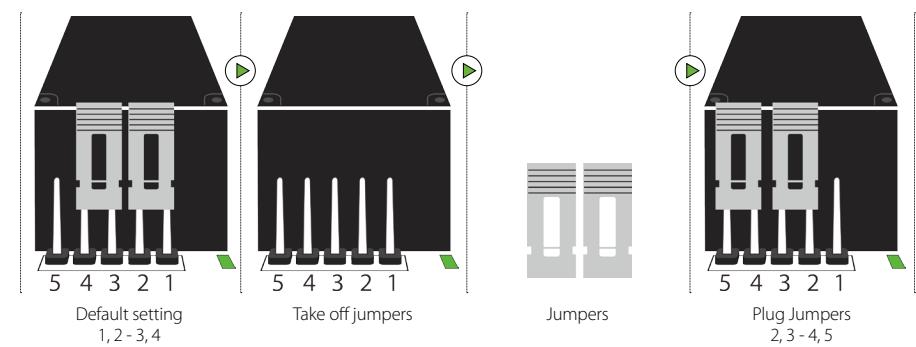

Figure 22

## Lock Connection

### Normally Open Lock Powered From Lock Terminal (Wet Contact)

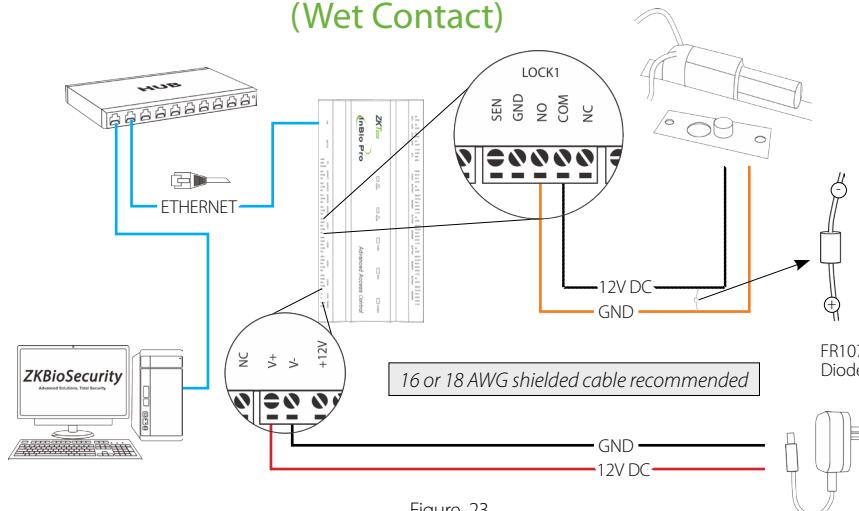

Figure 23

## Aux. I/O Connection

### Aux. Input Connection

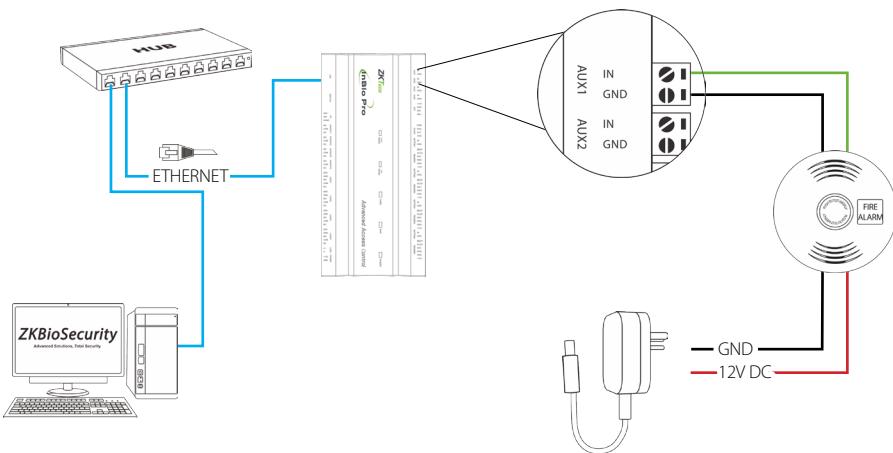

Figure 25

### Normally Closed Lock Powered From Lock Terminal (Wet Contact)

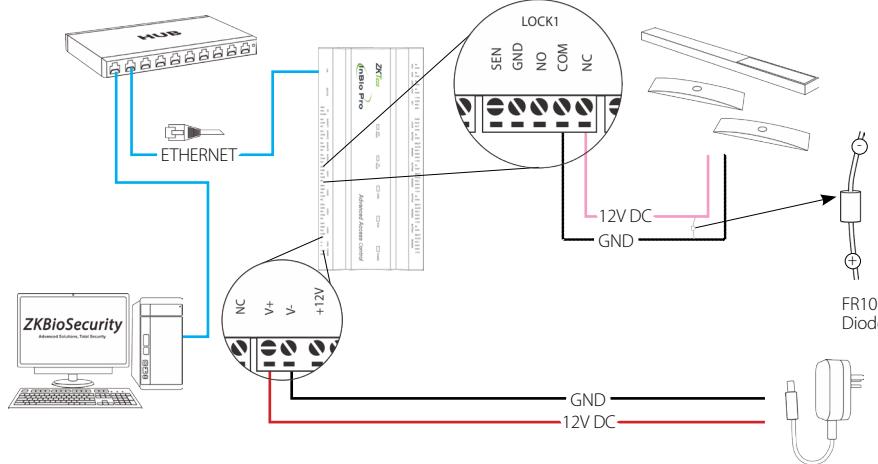

Figure 24

### Aux. Output Connection

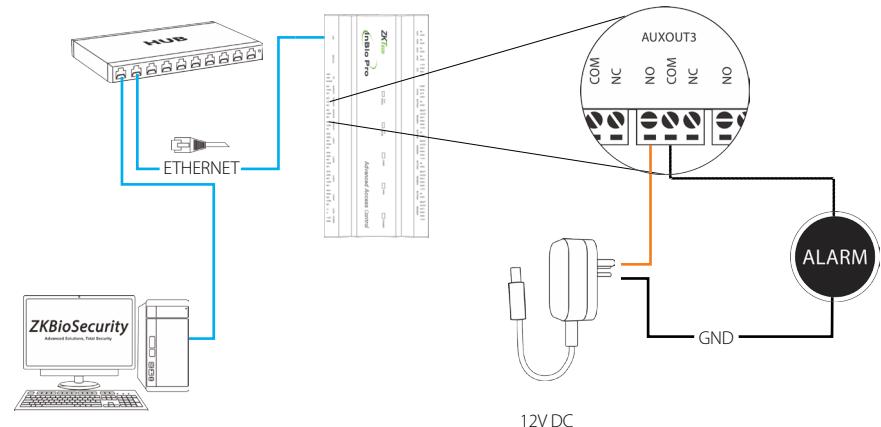

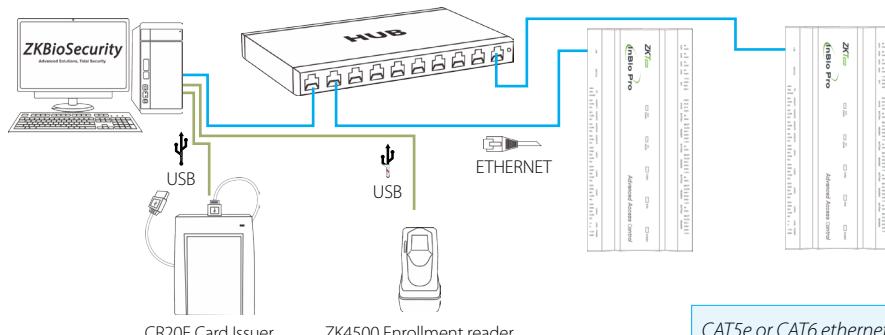

Figure 26

# Ethernet Connection

## LAN Connection

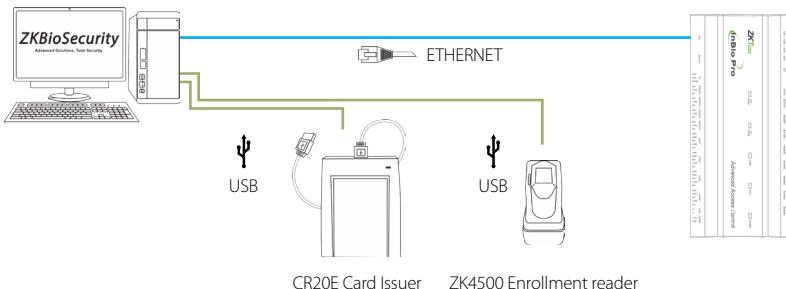

### Important Notes:

1. Both 10Base-T and 100Base-T are supported
2. This cable distance must be less than 330 ft. (100m)
3. For cable length of more than 330 ft. (100m). use HUB to amplify the signal.

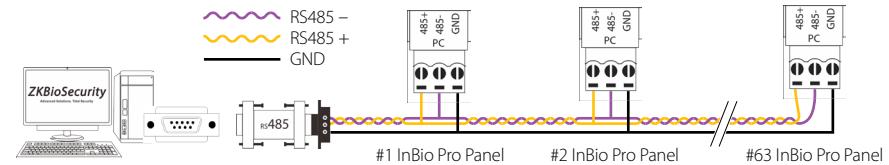

## Direct connection

To connect InBio Pro Panel with a PC directly, connect both devices with a straight network cable. As the InBio Pro Panel supports auto MDI/MDIX, it is not necessary to use a crossover type cable.

# RS485 Connection

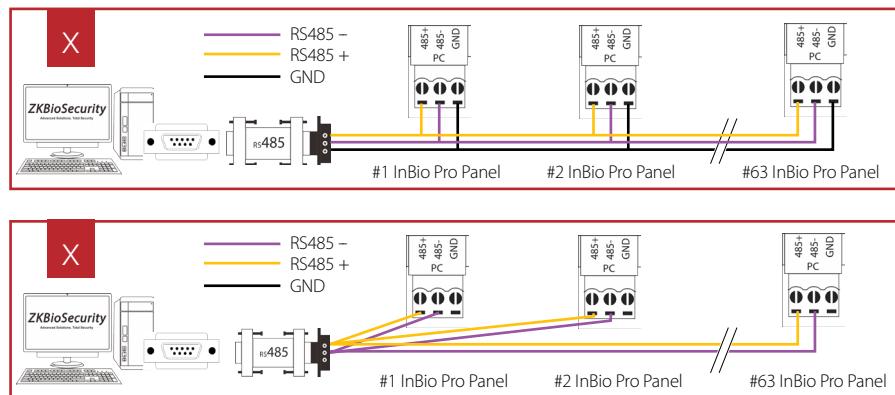

### Important Notes:

1. RS485 communication wires should be a shielded twisted pair cable. RS485 communication wires should be connected in a bus cascade topology instead of a star topology, to achieve a better shielding effect by reducing signal reflection during communications.
2. A single RS485 bus can connect up to 63 access control panels, but preferably 32 is recommended maximum.
3. To eliminate signal attenuation in communication cables and suppress interference, if the bus is longer than 200 meters, set the number 8 DIP switch to the ON position. This is equivalent to a parallel connection of one 120 ohm resistance between the 485+ and 485- lines.

## Incorrect RS485 connections

## RS485 Connection

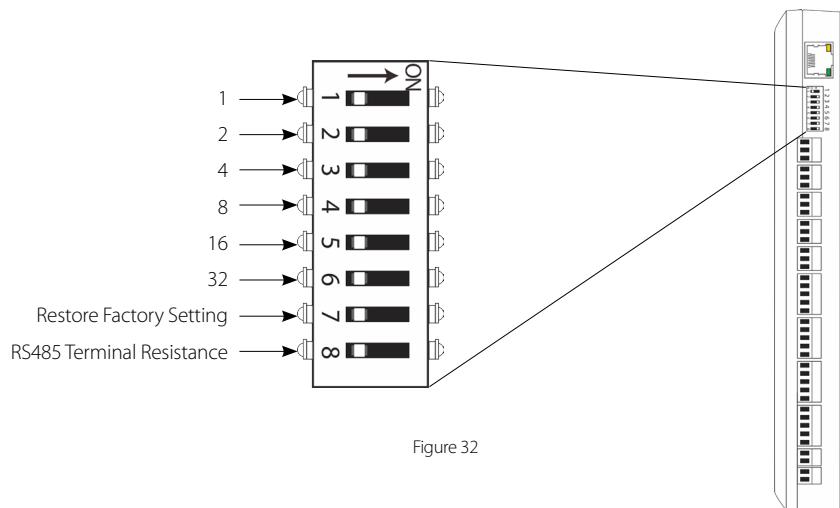

Figure 32

## DIP Switch Setting

### RS485 Address

- Number 1-6 are reserved to set the device number for RS485 communication. The code is binary, and the numbering starts from left to right. When the switch is set to ON position, it indicates 1 (on); when the switch is set downwards, it indicates 0 (off). For example, to set a device number 39=1+2+4+32, which corresponds to the binary code 111001, put number 1, 2, 3, and 6 to ON position, as illustrated below.

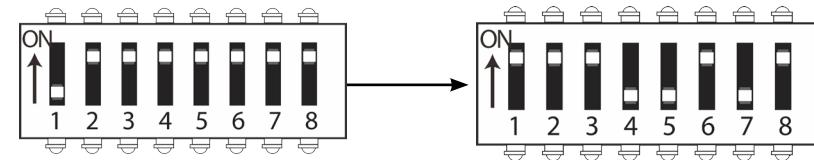

Figure 34

*For more details, please check the table at the end of this document.*

### Restore factory setting

- If you forget the IP address of the InBio Pro panel or the device does not work normally, you can use the number 7 DIP switch to restore InBio Pro Panel to factory default settings. The parameters which gets reset are device IP address, communication password, gateway, and subnet mask.
- The switch is OFF by default. When it is moved up and down for three times within 10 seconds and finally returned to OFF position, the factory settings will be restored after the access control panel is restarted.

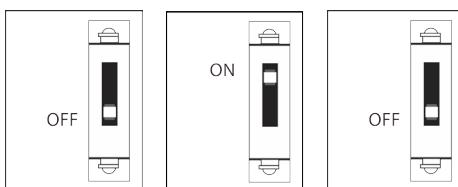

Figure 33

### Terminal Resistance

- Number 8 is for setting the RS485 termination resistance. Putting the switch to ON position is equivalent to parallel connection of a 120 ohm termination resistance between 485+ and 485- lines.

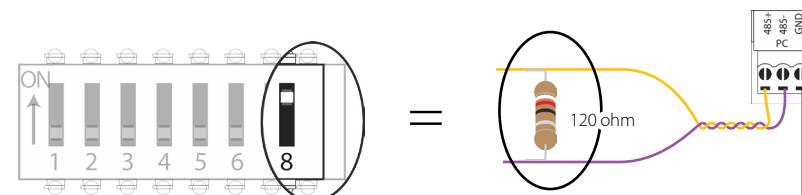

Figure 35

## Installation Diagram

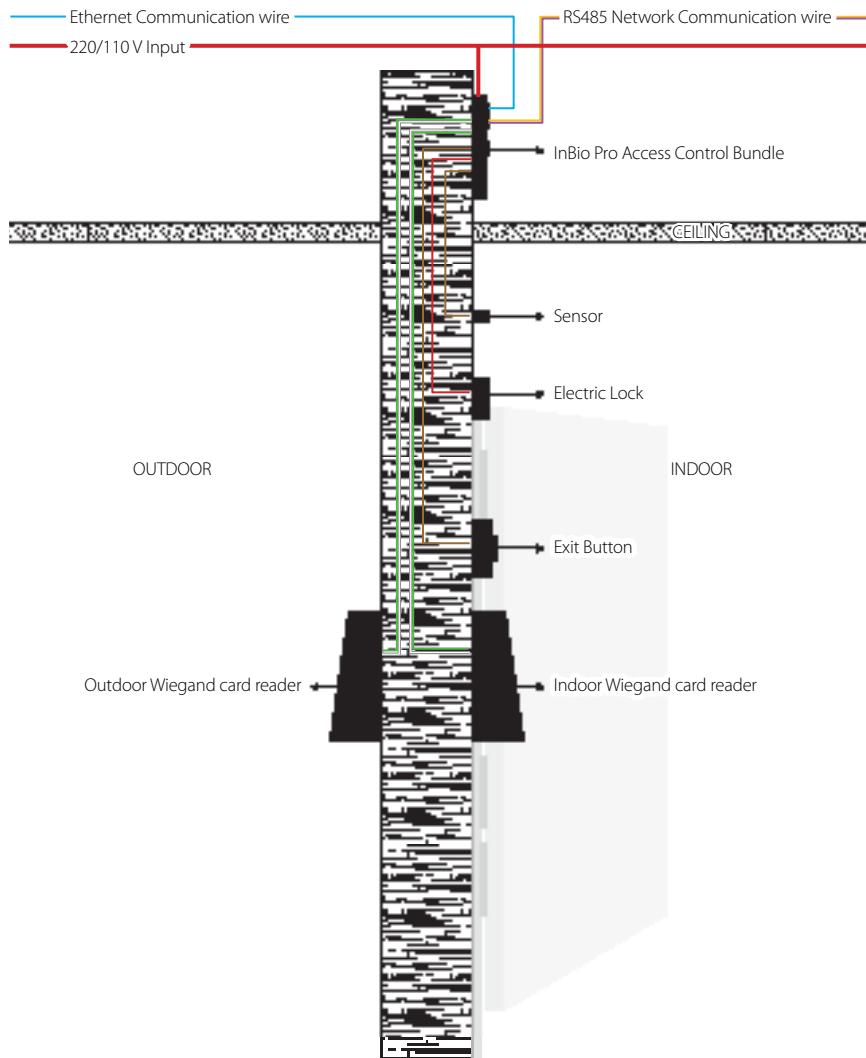

Figure 36

## Troubleshooting

### 1. How to switch four door one way to two door two way?

- › Connect four readers from reader 1 to reader 4.
- › Connect two door locks, one connected to LOCK1, another connected to LOCK3.
- › In the software configure reader 1-Indoor, and reader 2-Outdoor.

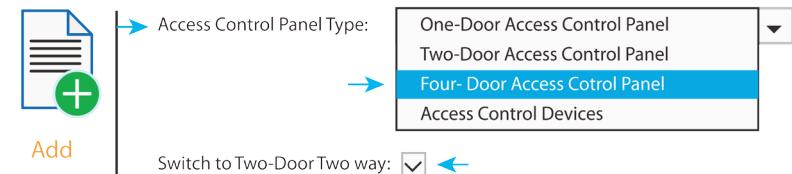

Figure 34

### 2. Can we integrate IP Camera and NVR?

- › Currently ZKBiosecurity software supports ZKTeco's IP Cameras and NVR.
- › You can associate a camera to the door and setup a linkage for the same.

### 3. What does it mean when I get a "Wiegand Format Error"?

- › Your WD0 and WD1 wiring is reversed.

### 4. How do I connect a third party reader or a stand-alone reader to a InBio Pro panel?

- › Connect the wiegand output to the WD0 and WD1 of the stand-alone readers on the panel's reader port.

*Note: The board can only supply 12 VDC, 300mA power so an external power supply may be required.*

### 5. What is the SD card slot used for?

- › SD card, stores transactions from the panel and creates a back up in addition to internal memory.

### 6. What kind of wire is recommended for the panel?

- › 16 or 18 AWG twisted shielded wire is recommended.

### 7. What is the default IP of the panel?

- › 192.168.1.201

### 8. How long is the device under warranty?

- › 1 Year from original purchase date, replacement/repair of hardware under ZK standard warranty requires an evaluation of the failed system by a ZK Technical Support specialist, and the issuance of a Technical Support RMA number.

## Specifications

Communication	RS485, TCP/IP
Baud Rate for RS485	9600-15200
Power Supply	12V DC, 2A
Card Holders Capacity	30,000
Log Events Capacity	100,000
LED Indicator	Indicator for communication, power, status and prox card
Environment	32-113 °F (0-45°C)
Operating Humidity	20% to 80%
Number of doors controlled	Four Door (four door one way and two door two way)
Number of readers supported	4
Types of readers supported	26-bits WIEGAND, others upon request
Number of Inputs	12 (4 Exit Device, 4 Door Status, 4 AUX)
Number of Outputs	8 (4- Form C relay for lock and 4- Form C relay for Aux output)
Weight	7.8lbs (3.55kg)
Enclosure	Metal Cabinet
Mounting	Wall Mount
Dimensions (Bundle Only)	15.7in. x 3.56in. x 13.0in 400mm(L) x 90.5mm(W) x 330mm(H)
Dimensions (Board Only)	8.0in. x 4.17in. 203.2mm(L) x 106mm(W)
CPU	32 bit 400MHz
RAM	32MB
Flash	128MB
Certified
